

Cocaine, THC, Opiates-Meconium

Effective February 16, 2015, the test for “Cocaine, THC, Opiates, Meconium” (MECON 4003, test code: 3507605) will be discontinued and replaced by “Meconium Drug Panel” (MECON DRG PN, test code: 3552047). In addition, two other meconium drug tests are discontinued. Please see “the message full text” for the description of changes.

Test name	Mnemonic and Test Code	Test	Test Description	Method
Meconium Drug Panel	MECON DRG PN 3552047	New Test Replacing MECON 4003 3507605	Cocaine and Metabolite Opiates Oxycodone Cannabinoids Methadone	The specimen is screened by immunoassay. The positive results will be confirmed by mass spectrometry
Cocaine, THC, Opiates, Meconium	MECON 4003 3507605	Discontinued	Cocaine Opiates Cannabinoids	Immunoassay (IA) Screen, Gas Chromatography/Mass Spectrometry (GC/MS) Confirmation
Cocaine, THC, Meconium	MECON 4002 3507602	Discontinued	Cocaine and Metabolite Cannabinoids Methadone	Immunoassay (IA) Screen, Gas Chromatography/Mass Spectrometry (GC/MS) Confirmation
Cocaine, Meconium	MEC COCAIN 3507601	Discontinued	Cocaine and Metabolites	Immunoassay (IA) Screen, Gas Chromatography/Mass Spectrometry (GC/MS) Confirmation

The changes were made because the meconium Opiates assay in (MECON 4003, test code: 3507605) does not test for Methadone and Oxycodone. These two tests were added to “Cocaine, THC, Opiates, Meconium” (MECON 4003, test code: 3507605) to create “Meconium Drug Panel” (MECON DRG PN, test code: 3552047).
